	<p>The diagram illustrates the frequency control system for Albania. It starts with the 'Scheduled frequency' (d) which is compared with 'Actual frequency' to determine the 'Frequency Bias' (c). This bias is then processed by 'Albania ACE' and 'Albania regulation' (e) to produce 'Regulation allocation' (f). This allocation is distributed to 'Other units' and 'Albania stations' (g) to maintain the 'Setpoint j'. The system also includes 'PI filter' and 'other filters'. Interchanges with Greece, Montenegro, and Kosovo are shown as inputs to the system.</p>
